EDUCATION

University of California, Berkeley, Haas School of Business **May 2028**
Master of Business Administration. Member: Haas Tech, Product Management & AI clubs.
4th in the Pegasus Airline x Berkeley Haas Hackathon.

UNIVERSITY OF BRISTOL, Bristol, UK **2015-2018**
BEng (Hons) Engineering Mathematics, First Class Honours. Equivalent to a 4.0, top in my class.
Applied Engineering, Statistics, Modeling & Programming.

EXPERIENCE

GECKO RISK *(Electric Vehicle Data Platform, for clients such as Tesla)* London, UK **2025-2026**
Head of Engineering

- Owned product and engineering for Gecko's customer-facing analytics platform, convincing the CEO and CPO to replace Tableau with an in-house build: it won Tesla and three insurers as clients, growing ARR 35%.
- Replaced an outsourced dev team with AI agents that triage alerts, draft fixes and ship features, after a 2-month benchmarking period. Platform costs fell 96% and dashboards shipped in 3 days, not 3 weeks.
- Reduced churn from 20% to zero by building an in-product feedback tool and using it to scope an AI charting feature, allowing customers to generate any chart from a natural-language query instead of requesting bespoke dashboards.
- Improved data pipeline performance 8x by consolidating a fragmented .NET codebase into a modular, serverless Python ETL platform on AWS (S3, Glue, Athena, Lambda) that any engineer (or agent) could easily pick up and extend.

RVU *(Tech Marketing; brands include Confused.com, Uswitch, Money & Tempcover)* London, UK **2024-2025**
Software Engineer

- Led cross-functional discovery with engineering and marketing teams across all 4 brands, synthesizing their requirements into a single user-tracking product spec, building the roadmap and prioritizing rollout by traffic volume.
- Lifted click-through rate 6% on cross-brand marketing campaigns by delivering the customer tracking data product at ~1M users/month, with 10x the previous tracking coverage.

TECHFIELD *(Tech Consultancy)* London, UK **2022-2023**
Founder

- Turned inbound requests from start-up founders in my network into a paid tech consultancy.
- Designed and built technical products and ETL data pipelines for various start-ups (e.g. Pockla - AI lead generation), which included work on a gen-AI marketing content tool and advising the founders on cloud architecture.

QUANT INSIGHT (QI) *(Financial Data Analytics)* London, UK **2018-2024**
Tech Lead (2nd technical hire, promoted 3 times)

- Ran discovery with hedge funds and data providers to bridge a gap in macro risk modeling, deriving a new quantitative model and whitepaper: now one of 4 risk models on Goldman Sachs Marquee, driving 50% of Qi's ARR.
- Reached 100+ institutional users by conceiving and launching a personalized trading assistant tool that integrated into clients' daily workflows, then led its relaunch as a new retail trader product.
- Delivered 20%+ annualized returns (back-tested, out-of-sample) from ML trading signals, which became the product behind partnerships with Squared Financial and Interactive Investor.
- Cut compute costs 45% through an infrastructure rebuild, while setting technical direction, managing an 8-person team and balancing roadmap delivery with two data migrations.

VENREX INVESTMENT MANAGEMENT *(Venture Capital)* London, UK **2014, 2017**
Associate

- Evaluated early-stage startups as potential investments, visiting companies and assessing product, market and traction, while managing investor communications and the administration of the investors' accounts.
- Eliminated 20 hours of recurring monthly work by automating client and government communications.

ADDITIONAL

- **Tech stack:** Python, TypeScript, C#, SQL, Terraform, Git, Tableau, AWS (S3, Glue, Lambda, EC2, RDS, SQS, API Gateway, CloudWatch), GCP (BigQuery, Dataform, Cloud Run, Cloud Monitoring), Claude Code, Cursor, Lovable, Jira, Notion.
- **Achievements:** Gold Maths Olympiad. Represented East England in national hockey tournaments.
- **Investing:** Angel investor in 14 early-stage startups since 2022 across tech and consumer, including Runna.
- **Projects:** Building an agentic engineering team that ships my web app ideas end to end (jack-field.com).
- **Interests:** Arsenal fan, avid golfer, padel tennis addict and live music enthusiast (50+ festivals/concerts).
